

Prof. Dr. med. Antonio Malgaroli

Specialist in Psychiatry and Psychotherapy, FMH member

Languages

EN,IT

Work Experience

- since 2020 Head of Field Project Master in Cognitive Psychology and H.C., USI - UniSR, Sant'Anna Clinic
- since 2017 Director of the Centre for the Study of Behaviour (International Center for Behavioral Neuroscience and Communication) University Vita-Salute San Raffaele, Milan, IT
- since 2016 Clinical Activity as Neuropsychiatrist, VilleTurro San Raffaele Hospital, San Donato Group, Milan, IT
- since 2000 Full Professor of Human Physiology, University Vita-Salute San Raffaele, Milan, IT
- 2017-2019 Clinical activity as Psychiatrist, The Tourette's Centre, IRCCS Galeazzi Hospital, San Donato group, Milan
- 1993-2000 Head of Unit of Neurobiology of Memory, San Raffaele Scientific Institute
- 1989-1992 Postdoctoral fellow, Department of Molecular and Cellular Physiology, Stanford University, Stanford, CA, US
- 1985-1989 Clinical fellow in Psychiatry and Psychotherapy, Postgraduate Degree in Psychiatry, Department of Psychiatry, Faculty of Medicine, University of Milan, Milan, Italy
- 1982-1985 Research Fellow, Department of Pharmacology, Faculty of Medicine, University of Milan, Milan

Education

- 1991 University of Milan, Specialisation Diploma in Psychiatry and Psychotherapy
- 1985 University of Milan, Degree in Medicine and Surgery
- 1985 Licence to practise medicine and surgery

Memberships

- since 2016 Member of Scientific Board, Italian Tourette Syndrome Association (AIST)

Awards

1985-88: Recipient of the AIRC research fellowship

1988-89: Recipient of the Monte Tabor research fellowship

1988: DeVisart award

1989-91: Recipient of the G. Moruzzi FIDIA research fellowship

1991: Chemofux prize, University of Vienna (Co-Recipient with Anna Teti)

1998-2001: Human Frontier grant award

1999: Herbert W. Rand Award, MBL

2000: Frank Lillie Award, MBL

2000: Elected as a member of the Physiological Society London

2000: Elected as a member of EMBO

Research

Antonio Malgaroli has published more than one hundred publications in the fields of neurophysiology, neuroscience, psychology and psychiatry, 58 of these are peer-reviewed articles with about 3500 citations in total; he has an h-index of 26, g-index of 58 (source: Google Scholar). His work has been widely described in many textbooks and reviews in the field of physiology and neuroscience. With regard to his current research activity, his interests focus on the mechanisms of brain synaptic plasticity. In addition to maladaptive aspects, which lead to functional and/or anatomical abnormalities and are therefore involved in the genesis of many neuropsychiatric diseases, plasticity phenomena underlie many compensatory processes, such as those induced by therapies, not only pharmacological but also psychoanalytical and psychotherapeutic. In detail, the main research interests focus on four thematic areas:

1. The plasticity of neural networks and its cellular and molecular mechanisms. In this field, he has obtained important results in understanding the mechanisms of induction and expression of synaptic plasticity, both in the hippocampus and in the prefrontal cortex.
2. Development of innovative techniques for the functional study of synaptic circuits in vitro and in vivo. His achievements include the first technology for the electrical measurement of the activity of a single central synapse, and the first technology for the functional assessment of synaptic activity changes in a neural network in vitro. Recently, after several years of work, he developed the only method available today to record synaptic activity in vivo (GreenZip), a technique that is used for many of the questions in section 3, below.
3. The neurobiological mechanisms and clinical aspects of certain psychopathological conditions such as anxiety and stress, anorexia, Tourette's syndrome, understanding the mechanism of action of certain psychoactive drugs such as ketamine, which is used today for the treatment of major depression that is not responsive to other treatments.

Human clinical projects include: the study of OCD in Tourette Syndrome; ii) The implementation of TMS brain magnetic stimulation protocols to induce lasting plastic changes in brain circuits involved in certain psychiatric disorders (OCD, anorexia, depression, S. Tourette); The use of TMS to assess the involvement of certain brain areas in attentional and decision-making aspects and the effect of emotional states.
